Please be sure to remove Quick Bleeders from your fork (if present)! Risk of oil leakage and breakage. Please only send us pre-cleaned suspension components!

Remove all screws from the suspension components (e.g., fork clamps) or tighten them securely. Also remove all parts such as fork protectors, starting aids, etc.

Secure loose parts such as the bearing caps on the shock absorber against falling out using cable ties, string, or wire. If possible, label your suspension components with your name.

Pack the components well protected, for example, with bubble wrap or similar.
